

Therapeutic Hypothermia Management

A supportive partnership for newborn care

Complete workstation

Wireless CFM tablet

Workstation

Our Therapeutic Hypothermia workstation is a complete solution designed for the management of Hypoxic Ischemic Encephalopathy (HIE). It combines the Tecotherm Neo servo controlled cooling device and integrated Unique CFM for continuous monitoring of aEEG and other parameters such as EEG, ECG and rSO2.

The compact size and convenient mobility of the workstation means it can fit easily by the bedside where space is limited. It also helps keep the workspace tidy with two drawers for user manuals, accessories and other items.

Transport Kit

Treating HIE in transport is becoming standard practice for clinicians. Our transport kit includes the servo control Tecotherm Neo device ideal for stabilising temperatures on the move and a fully portable Unique CFM system which allows you to monitor continuous aEEG.
